Energy is Everywhere

Energy is all around you, and it comes in many forms. Forms of energy related to changes in matter include thermal energy, chemical energy, electromagnetic energy and electrical energy.

For each lab activity today you will be asked to draw a picture of the experiment and then take notes on that particular type of energy from the energy section of your textbook (begins on page 74).

Thermal Energy	
Sketch	Notes
Chemical Energy	
Sketch	Notes

	Electromagnetic Energy
